Third Lake Property Owner  
Third Lake, Illinois

Re: Proposed Chemical Treatment for Eurasian water-milfoil and curly-leaf pondweed, Third Lake, Lake County, Illinois

Dear Third Lake Property Owner or Occupant:

The Village of Third Lake with Wisconsin Lake & Pond Resource will be assessing and chemically treating the aquatic invasive species (AIS) Eurasian watermilfoil (EWM) and curly-leaf pondweed (CLP) in Third Lake. Areas to be treated include up to 5.76 acres EWM and 13.15 acres of CLP.

A copy of proposed areas is included. Proposed treatment areas were identified based upon the presence of nuisance levels of aquatic plants during a recent survey of the lake. Only those areas that are designated in will be treated with the final determination of where treatment may occur to be made by a final on-site inspection.

The proposed treatment is going to take place during the week of April 21-25 depending on weather and is designed to target specific areas. The area to be treated near your property may be selectively treated to help reduce the nuisance population of AIS and help restore native aquatic plant populations in the Lake. The day treatment takes place a bright yellow sign will be placed at the boat access along with final management maps. **Areas of CLP growth will be treated with Aquathol K while areas of EWM will be treated with ProcellaCOR EC. Please read the yellow treatment sign carefully. For all areas, there are no restrictions on the use of treated water for swimming, fishing, fish consumption, boating, or animal watering.**

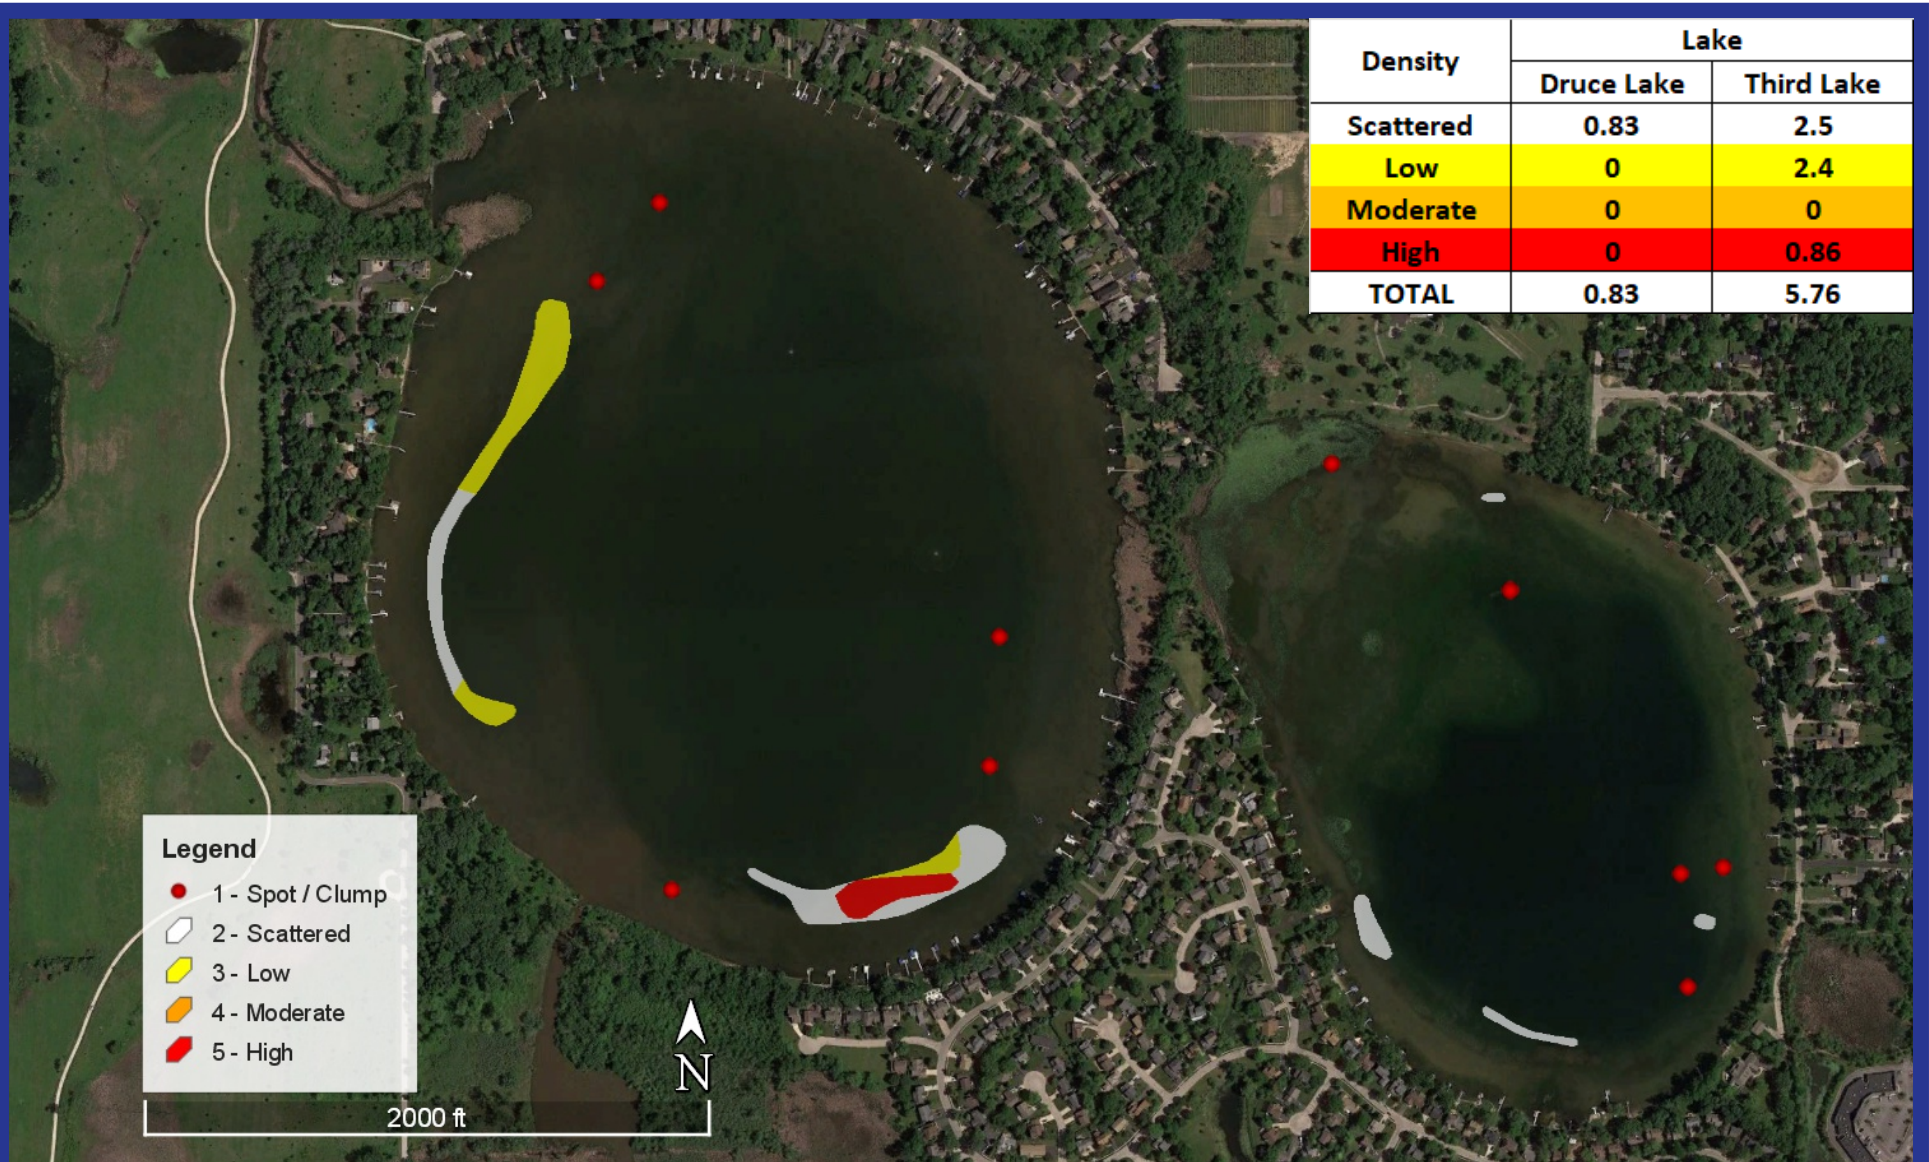

**Aquathol K only treatment areas (CLP only):** Lake users are able to use the treated water for any recreation activities (boating, swimming, fishing, etc.), animal watering, and irrigation without restriction immediately after treatment, but should refrain from using treated water as drinking water until endothall concentration are below 0.1 ppm.

**ProcellaCOR EC treatment areas (EWM only):** Lake users are able to use the treated water for any recreation activities (boating, swimming, fishing, etc.), domestic purposes, watering animals, and drinking water without restriction immediately after treatment. Water from treated areas should not be used for irrigation for 1 day following treatment.

If you have questions or request a current copy of the manufacturers' label for the herbicides to be used for this treatment, please contact Wisconsin Lake & Pond Resource at (920) 872-2032. Neither the Village nor the applicator can answer specific questions about herbicide use and possible effects other than what is represented on the approved label. The EPA registers all products for use within the U.S.

Sincerely,

Village of Third Lake
